

The Electronics Partner Built for the Data Center Power Buildout

Precision. Control. Integration. Accountability.

Every megawatt of data center capacity needs generation, switchgear, and distribution behind it — and each carries controller boards, ATS and protection electronics, and monitoring PCBAs. With genset lead times industry-wide still running well past a year, the boards inside your gear should never be the constraint.

Libra Industries builds the electronics content under one quality system, with one team of experts, and owns the outcome.

CONTROLS & PROTECTION PCBA

Genset controllers, ATS boards, and protection modules — IPC Class 3 workmanship.

PANELS, HARNESS & BOX BUILD

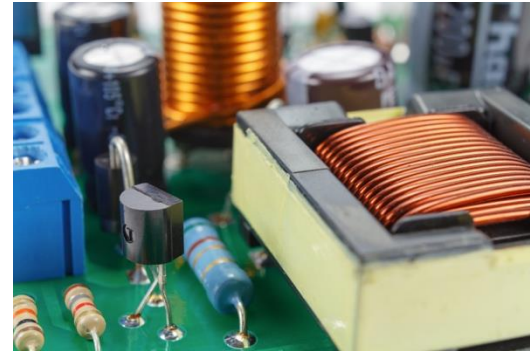

Relay panels and control enclosures wired, tested, and delivered integration-ready.

HIGH-RELIABILITY DISCIPLINE

Defense and aerospace-grade traceability and documentation for hyperscale QA.

NPI TO VOLUME, THREE SITES

Dallas and Dayton in the US, with Guaymas for USMCA-qualified volume.

Why This Matters to Your Backlog

Power OEMs are winning on lead time — record backlogs, multi-year data center awards, and delivery promises measured in weeks saved. Every single-sourced controller board is a risk to that advantage. Libra is built to take that risk off your critical path.

With Libra, your supply chain team gains a partner that can:

- **Protect your lead-time advantage** — a qualified second source for controller, ATS, and protection boards.
- **Relieve floor space** by taking boards, panels, and box-build off lines committed to heavy gear.
- **Respond fast on ECOs** with an engineering-led team that owns the outcome.
- **Validate quality at every stage** — IPC Class 3 workmanship and AS9100 / ISO documentation your hyperscale customers can audit.
- **Scale confidently from first articles to USMCA-qualified volume in Guaymas, under one quality system.**

Built to Deliver for Power

For power OEMs, that means a single, accountable partner for the electronics content in gensets, switchgear, and distribution — protecting the delivery promises your data center customers are buying. Scope extends to fully integrated control panels and fabricated enclosures where that helps.
